ABSTRACT

COVID-19 vaccinations have failed and are based upon wrong principles and made humanity suffer heavily due to their side effects. Secondly, monetisation and the mutual sharing of profits by the corporate world and politicians are regretted and unacceptable. COVID-19 has become a permanent part of human life and shall stay with us permanently as CO₂ is the surviving medium for COVID-19. The combination of oxygen inhaling and Alternate Medicine are the future programme to combat COVID-19 with no side effects. Establishment of the oxygen inhaling stations at 2 miles apart all over the world are suggested as the oxygen-inhaling regularly exhales CO₂ causing Brain stroke, heart failure, blood clotting have been attributed to excessive volumes of vitamin K consequent to over excitation or over-activation of vitamin K producing gut bacteria COVID-19 Vaccination.

KEYWORDS:- COVID-19, O₂, CO₂, Vitamin K, Alternate Medicine.

INTRODUCTION

SARS-CoV-2 S protein and its variants (Including FLIRT variant recently identified in the UK) are death traps for humans and may extinguish the humanity upon earth if the virus transmission remains uncontrolled. The temporary solution does not fit the will. We need a permanent solution which appears to be a remote possibility today.

With the unknowledgeable corporate world and unscientific fixed philosophy on the elicitation of overproduction of antibodies with the vaccines loaded with antigens like dead spike protein, the nexus of world politicians and corporate world, the half-baked scientific brains and talent has been exposed badly with the information on the incurable side effects of vaccination world over-a worrying point for world Communities including India.

In 2024, Allen Haddrell et al.^[1] worked on “ambient carbon dioxide concentration correlates with SARS-CoV-2 aerostability and infection risk”- a revealing study that led to future sciences thereon. Sawhney^[2] in 2024, studied on New principle-based development of Naphthoquinone as a universal preventive drug (coded as GSPZ9) against SARS-CoV-2 S protein and its variants and introduced a Alternate Medicine to contain SARS-CoV-2 infection with no side effects whatsoever. Scientists^[3-12] world over have worked on different aspects of SARS-CoV-2 and its variants with different

lines of action to find out why SARS-CoV-2 and its variants transmit.

The recent surveys have shown that the principles on which COVID-19 and its variants and their jabs have been based by scientists the world over, lack of basic studies on the nature of spike proteins, resulting in irreversible side effects upon humans on account of COVID-19 injections, So this study to dig deep into the subject proposing new lines of COVID-19 treatments with new biomolecules and Alternative Medicine with no side effects whatsoever.

RESULT

Two studies in 2024 by Sawhney in WJPLS and Haddrell in Nature Communication have been found revealing and promising on COVID-19. Quality soil-based forestation upon earth has been found effective in the production of Alternate Medicine to deal with COVID-19 with no side effects in contrast to the side effects of COVID-19 jabs, based upon the unscientific principle of overproduction of antibodies which stand evaded by the natural cover of spike protein glycosylation. The scientific lines of direction on COVID-19 are likely to change due to 2024 two studies, with the emphatic shift to Alternate Medicine and O₂. Nature balances the gases composition in the atmosphere. Deforestation and concentration of CO₂ in the air aggravate COVID-19 infection. O₂ and Alternate Medicine are the 2 future hopes to combat COVID-19

and its side effects. The more the O₂ inhaled, the more the CO₂ exhaled, lowering the CO₂ concentration in the body to the minimum with no chance left for COVID-19 virus to attach the Furin proteases. The presence of Alternate Medicine in the body would neutralise the functional Furin protease on the lungs with no chance left for the COVID-19 virus to attach it.

DISCUSSION

For good quality soil under normal natural conditions, the chemosynthesis pedogenesis and photosynthesis play an effective role in line with the strategic line of nature. Likewise, life depends upon normal immunity, organal biologistics, and bio-atmospherics in the human system. These phenomena in the human body are strategically normal which contribute heavily to the perfect human life on earth.

Any deviation from these natural normal, the human life affliction occurs but with the knowledge of the human life normal, the situation can be controlled.

These basics of human life have been ignored by world scientists, while meeting the challenges of SARS-CoV-2 S protein and failed to attain scientific maturity on SARS-CoV-2 protein functionality and so humanity has suffered heavily at the hands of SARS-CoV-2 protein during hospitalization and after dehospitalization. The side effects of COVID-19 vaccination which have been reported worldwide are brain stroke, heart failure, blood clotting, diabetes, permanent herpes, and lung-related several afflictions, etc etc. which have been shockingly received the world over. This is a new challenge for the world to face with all the demands for decoding the causes and effects of COVID-19 vaccination.

A multi-country observational study in Pfizer, Moderna, and AstraZeneca vaccines showed side effects of thrombosis and thrombocytopenia syndrome (TTS) which translates to a blood clot and low level of platelets (a type of blood cell that prevents bleeding) Guillain-Barre Syndrome, an autoimmune disorder that leads to neurological syndrome and brain clots within 42 days of receiving the vaccine. India borrowed at a price the formula designed by AstraZeneca company and re-branded it as COVISHIELD in India.

All the statements of scientists in India and the world over who do not demonise jabs but say that the benefits outweigh are unscientific, immature and irresponsible.

Homework on the subject and its allied areas is necessary. The misfiring of understanding on the area of activity is scientifically and humanly dangerous. Scientific obsessiveness on an idea only has never been promising and paying and generally misfires with no positive lead on the subject. The mishappening, being observed and seen today, as a side effect of COVID-19 vaccination is unfortunate. Had the basics of science, been followed there would have been no such

mishappening in the world.

Corporate world believe in monetisation and multification and has no interest in doing sciences. The corporate group of world scientists has commercial interest and no regard for humanity. This world is opportunistic and enches the opportunity at all costs, with the least concern for human life.

The health controversy has developed world over including in India by AstraZeneca which jointly developed with Johnson & Johnson. AstraZeneca vaccine is responsible for thrombosis and thrombocytopenia syndrome (TTS) as per report or information submitted in UK court by AstraZeneca. Now the company has withdrawn all the stock of vaccines from the world market with no insurance to the world that the cause and effect of TTS etc would be researched on. Covishield is based upon the borrowed formula of AstraZeneca vaccine by the corporate world in India. Pune-based Serum Institute of India which has withdrawn the whole stock of Covishield vaccination from the India and world market, and has not assured solution.

The science doing and treatment of human diseases including COVID-19 infection needs to be concluded with seriousness to detail Homework thereon, The COVID-19 vaccination has been based upon the multiplication of antibodies with the idea of engulfment of life SARS-CoV-2 S protein. This idea has failed and is unscientific proactively as reported recently the world over. The COVID vaccines including ones which are loaded with dead spike protein pieces which act as antigens, help the body to produce and multiply antibodies. This has been accepted and adopted by the corporate world and the world governments in a hurry without homework details on the subject and SARS-CoV-2 S protein. Both the world governments and corporate worlds joined hands to monetise and share (trillion dollars or 60 times Indian currency) on the misplaced principle of multiplication of antibodies with the expected hope of engulfing life SARS-CoV-2 - a wrong scientific concept as the live SARS-CoV-2 S protein and its variants had been reported with spike protein with glycosylation, the reference of which can be found in WJPLS (Sawhney), covering thereon with the defined property of invading antibodies - an evidence proving the principle of antibodies multiplication to engulf or neutralize life SARS-CoV-2 S protein. It is unfortunate to put on record the misplaced Nobel Prize (2022-2023) by the Nobel Prize committee to scientists who discovered the principle of multiplication of antibodies without understanding basic natural property of SARS-CoV-2 S protein virus.

In 2024, two studies by Sawhney (India) and scientists of Bristol University UK have been revealing and promising to accept the challenges of SARS-CoV-2 S protein in sharp contrast to the discovery by the Nobel

Prize winner as said above.

Sawhney published his study on meeting the challenges of SARS-CoV-2 S protein and its variants with Alternate Medicine in WJPLS, based on the principle of neutralising live SARS-CoV-2 S protein before and after the entry of virus in the body with Alternate Medicine through hydrogen bonding of the functional group of spike protein and Alternate Medicine inside and outside of the body. Sawhney further says that the Alternate Medicine has the capacity of neutralising Furin protease the point of attachment of spike protein in the body before it accesses to it through hydrogen bonding, leaving no space for spike protein to attach thereon. The furin protease the spike protein hydrogen bonds inside the body is the infection point and its spread. The Alternate Medicine has no side effects whatsoever in sharp contrast to the COVID-19 vaccination.

Allen Haddrell et al in 2024 published data in Nature Communication on the CO₂ gas as the surviving medium for SARS-CoV-2 protein in the human body or atmosphere for COVID-19. CO₂ stays universally, and so the SARS-CoV-2 S protein with human life. This study is revealing.

ElNino effect, inhaling and exhaling by animals, continue adding CO₂ in the atmosphere, increasing the chances of spike protein to stay with us. This concept fails the ongoing COVID-19 vaccine concept for antibody multiplying principle, which has revealed irreversible side effects upon human life.

Sawhney introduced Alternate Medicine in 2024 (Published in WJPLS in 2024) based on the contrasting principle of neutralizing SARS-COV-2 protein, the furin protease in the body before it is accessed by spike protein to attach it is neutralised. Alternate Medicine has no side effects like those of ongoing COVID-19 vaccination in the world. The oral dose, Hopcalite loaded with the Alternate Medicine has been standardised in the laboratory of Sawhney in India. The begging question is how and why the COVID-19 vaccine shows side effects. The answer is hidden in Vitamin K under normal conditions of the human system. The biologistics and bioatmospherics remain balanced meeting the bio-demand of the organs of the human system with the satisfaction of the body functionality in line with the nature strategic approach thereon. The normal bacterial production of vitamin K in the gut and its release in the blood, which supplies the bio-requirement of life where the biosynthesis of coagulating factors Protein C and Protein S and released to the blood, where the human blood is coagulated moderately, enabling the blood under acquired condition to flow with the defined purpose of oxygen supply organically to survive the body as defined by inhaling (O₂) and exhaling (CO₂) occur.

Vitamin K is the bio-requirement of each of the body organs: brain, heart, pancreas, kidney, liver etc. It is

hypothesised that COVID-19 vaccines may cause organal excitement or over-activation of the organs and vitamin K biosynthesizing gut bacteria. As a result, the over-activated gut bacteria overworks and produces Vitamin K in high volume and releases excessive concentration in the blood. With excessive concentration of vitamin K volume the liver biosynthesises the immoderate quantity of protein C and S. With excessive release of protein C and S in the blood, the blood gets coagulated immoderately by causing the blood to thicken beyond moderation and slow flow of blood, towards brain and heart etc. The coagulated blood beyond moderation may get deposited in the brain, heart etc resulting in what is called Brain stroke and heart stroke. Vitamin K is bio-required by all body organs. Slow activation or over-activation of vitamin K synthesizing bacteria as the side effects of COVID-19 vaccination are always serious for human life. The possibility of slowing down insulin production in the pancreas, as the side effect of COVID-19 vaccination may cause diabetes in humans. It has been observed also that overexcitation of nerve cells may cause permanent herpes in humans.

It is concluded that with a scientific fact that there will be no side effects in future if the combination of O₂ and Alternative Medicine is practised to treat COVID-19.
